

A scatter plot showing the distribution of sepal length (cm) for three Iris species: setosa, versicolor, and virginica. The x-axis is labeled 'species' and the y-axis is labeled 'sepal length (cm)'. The setosa species shows a distinct cluster at the bottom (low sepal length). The versicolor species shows a cluster in the middle (medium sepal length). The virginica species shows a cluster at the top (high sepal length).
